

In the Claims

1-27. (canceled)

28. (currently amended) A method of coating an implantable device comprising applying a composition onto the implantable device to form a coating, the composition comprising

(1) a first block copolymer comprising a block having a glass transition temperature (T_g) below about body temperature and a second block having a T_g or a melting temperature (T_m) above about body temperature, and

(2) a material ~~selected from the group consisting of~~ comprising a biobeneficial polymer conjugated with the first block copolymer, ~~a second block copolymer and combination thereof, wherein the second block copolymer comprises~~

~~(i) a biobeneficial component; and~~

~~(ii) a component selected from the group consisting of components miscible with the first block copolymer and components insoluble in water.~~

29. (previously amendment) The method of claim 28 wherein the composition further comprises a bioactive agent.

30-35. (canceled)

36. (previously presented) The method of claim 28 wherein the implantable device is a stent.

37-53. (canceled)
